Features of our Stamped and Formed Sockets

1. Our socket's have bottom loaded contacts others have top loaded contacts which sometime come out when extracting IC
2. We have true double-sided contacts. Other sockets although claim Double-sided, their one side is resting against the wall which means effectively only one contact is working. Double contact gives four times reliability.
3. Our sockets have bottom sealed with kapton film which prevents solder from going inside and jamming the contact.
4. Our contacts are fully plated after stamping other have unplated edges as they are stamped from plated strips.
